EDUCATION

University of the arts London (lcc) : CertHE Preparation for Design, Media and Screen (2023 - 2024)

Bournemouth University NCCA : BA Computer Animation and Visual Effects (2024 - 2027)

PROJECT (S)

Mouldy Moira

Oct 2025 - May 2026

Rigging / Animation / Pre- production: 2D artist (Dynamic storyboard / Concept)

*Manual and Advanced Skeleton available for rigging file / Extra work for animation and concept

During my Level 6 year, I participated in a group project with Mouldy Moira, where I was responsible for character rigging in Maya. To give animators more options and ensure the final rigging file had as few model issues like twisting as possible, I spent a month creating two versions: one with manual rigging and one with an advanced skeleton. These improved animation production efficiency and prevent the risk of potential model glitches. In addition, I helped the animators create the initial draft of the opening animation and outcome for ending.

Fushenn: The Tale of Cangji (浮生灯火： 沧稷谭)

Rigging / Animation

Jan 2026 - Present

This project is still in the early pre-product stage. I will receive three models for rigging. I plan to use Advanced Skeleton in Maya for all the rigging directly, which will save a lot of time. In addition, I will also join in the animation production with other member.

SKILLS

3D ANIMATION

Animation Editor / Curve Spine editing (Maya)

I am willing to be patient and repeatedly follow the reference video and model to ensure natural and vivid movements.

RIGGING

Advanced Skeleton / Node editing / Weight painting (Maya)

My aim is to create efficient and rigging with less issues. At the same time, I will further improve the controller icon and weight painting.

2D ANIMATION / CONCEPT

Flip book / Memes / Concept Doodle / Character Animation GIF (TVP Animation / Procreate Dreams / Procreate)

In my spare time, I create 2D animations of my favorite characters and share them on social media. I have my original character, and I make some concept work for them.

ABOUT ME

I study in NCCA Bournemouth University, which is famous in 3D area. I have learnt a lot about Maya animation setup, management and professional practice. So I specialize in Digital Media Arts with a focus on animation and rigging and animation, rigging testing in Maya. I see lots of opportunities in the 3D industry, such as in open-world 3D games like 'Rock Kingdom: World' and 'Arknights : Endfield'. I think creating character animations for them would be really cool.

MY AIMS

I would like to delve deeply into the field of 3D animation, and I aim to combine technology and art for long-term to provide the team with high-quality and stable animation, rigging productions. If possible, I would also like to learn how to use other software such as Blender and UE5 during my work.
